Abstract

The fight over artificial intelligence is not only a fight over products, model benchmarks, or corporate market share. By December 17, 2024, the Bipartisan House Task Force on Artificial Intelligence had already recorded the training-data conflict in terms overlapping with the dossier's own framework: reproduction, derivative-work theory, commercialization, consent, credit, and compensation. The dossier therefore does not end in a vague call for better ethics.

Keywords

Opening framework; surveillance capitalism; AI imperialism; AI weights; patrimony of humanity; evidence-based dossier

Research Question

How should the dossier's opening framework connect surveillance capitalism, ownership of AI weights, and the three-reform program?

Scope and Framing Note

This paper examines opening framework within the broader dossier *From Surveillance Capitalism to AI Imperialism*. It is intentionally written to circulate on its own: necessary context is restated, evidence boundaries are made explicit, and cited material is reproduced in paper-local form rather than delegated to repo navigation. It contributes to the series as a paper that frames the civilizational ownership question and announces the three-reform destination. Adjacent reinforcement appears in Chapter 01, Chapter 04, Chapter 10, but those cross-references are supportive rather than required for basic comprehension.

Central Thesis

The fight over artificial intelligence is not only a fight over products, model benchmarks, or corporate market share. It is also a fight over who owns the condensed value of collective human cognition. In this dossier, the central question is whether captured human language, art, code, labor, culture, science, and emotion can be turned into privately governed strategic weights without triggering a deeper political challenge. [1](#)

This chapter also sets the repo's two writing layers. The files in `chapters/` are the reference-corpus narrative: readable, source-traceable, and explicitly bounded. The files in `papers/` are the durable paper-format outputs: self-contained, numerically cited, linked to a global appendix, and reusable for later publication or adaptation. The two layers serve different audiences, but they defend the same argument. [2](#)

Evidence and Method Note

This paper is derived from the chapter corpus for Chapter 00 and is grounded in the project's structured research OS. It relies on source notes, extracted claims, entity profiles, and timeline events already normalized under the dossier's evidence hierarchy. Documented facts are asserted directly where the record supports them; disputed matters are marked as such; interpretive claims are bounded explicitly; and speculative overreach is isolated in the evidence-boundary appendix.

Introduction

This paper asks: How should the dossier's opening framework connect surveillance capitalism, ownership of AI weights, and the three-reform program? Its working answer is clear from the start: The fight over artificial intelligence is not only a fight over products, model benchmarks, or corporate market share. It is also a fight over who owns the condensed value of collective human cognition. In this dossier, the central question is whether captured human language, art, code, labor, culture, science, and emotion can be turned into privately governed strategic weights without triggering a deeper political challenge. [3](#)

This chapter also sets the repo's two writing layers. The files in `chapters/` are the reference-corpus narrative: readable, source-traceable, and explicitly bounded. The files in `papers/` are the durable paper-format outputs: self-contained, numerically cited, linked to a global appendix, and reusable for later publication or adaptation. The two layers serve different audiences, but they defend the same argument. [4](#) The objective is not only to recount developments, but to show why the subject of this chapter belongs inside a structural argument about extraction, enclosure, legitimacy, and reform.

Historical or Institutional Context

By December 17, 2024, the Bipartisan House Task Force on Artificial Intelligence had already recorded the training-data conflict in terms overlapping with the dossier's own framework: reproduction, derivative-work theory, commercialization, consent, credit, and compensation. Footnote `40` on physical page `116` cites Mark Uriostegui's essay directly. That does not prove the argument on the merits, but it does prove institutional uptake. [5](#)

Main Analysis

Paul Lara's published writing adds the dossier's second framing line: technofeudalism, debt-heavy buildout, paper valuation, and the smoke-economy vocabulary needed to describe how extraction is financed and politically sold. The dossier uses that line as interpretive framing, not as a substitute for primary evidence. [6](#)

Interpretation: the strongest defensible reading is not that every later chapter proves a single grand conspiracy. It is that a coherent line can be drawn from platform extraction, to social weakening, to pandemic acceleration, to model training, to labor correction, to access chokepoints, and finally to legitimacy and capture. The burden of the dossier is to keep the factual layer and the political interpretation distinct while still arguing forcefully from the evidence. [7](#)

Position Within the Series

This paper sits inside a coordinated 11-paper architecture. Its nearest companions are Chapter 01 (Social networks as infrastructure for free data capture), Chapter 04 (AI arrives when the human raw material already exists), Chapter 10 (What to do). In that series logic, Chapter 00 frames the civilizational ownership question and announces the three-reform destination.

Counterarguments

The opening can overreach if it treats the enclosure argument as already complete in legal doctrine rather than politically and institutionally emergent. The House citation proves relevance, not victory. The Lara framing sharpens the language of the dossier, but it does not replace the need for documentary support chapter by chapter. [8](#)

Limits of the Evidence

The opening can overreach if it treats the enclosure argument as already complete in legal doctrine rather than politically and institutionally emergent. The House citation proves relevance, not victory. The Lara framing sharpens the language of the dossier, but it does not replace the need for documentary support chapter by chapter. [9](#)

Reform Relevance

The dossier therefore does not end in a vague call for better ethics. It moves toward three explicit reforms:

- Refactor Section 230
- AI Weights as Patrimony of Humanity
- Limit Government Capture by AI Companies

Interpretation: those reforms are not presented as already enacted or legally settled. They are the dossier's normative answer to the documented structure of extraction, enclosure, and capture. [10](#)

Conclusion

The dossier therefore does not end in a vague call for better ethics. To test that argument, the dossier has to begin before frontier AI. In the architecture of this series, Chapter 00 therefore functions as a self-contained argument while also advancing the cumulative path toward the dossier's three reforms.

Notes

This paper is designed to circulate independently. Public notes point readers to the real external documents first, then to the paper-local appendix entry that explains why each source matters.

The underlying research OS distinguishes among Documented Fact , Disputed Fact , Hypothesis / Interpretation , and Speculative Narrative Risk . In Chapter 00, those boundaries remain visible in the prose, in the bibliography, and in the appendix sections that summarize claims and caution points.
